

HANGALA CAPITAL CORPORATE FUND A1

MINIMUM DISCLOSURE DOCUMENT

INVESTMENT AND RETURN OBJECTIVE

The Fund aims to return CPI + 3% per annum through a full interest rate cycle while providing stability by aiming never to lose capital over any rolling 3 month period. At least 45% is invested in Namibian assets.

INVESTMENT PROCESS

This Fund invests in local and offshore money market, bonds, property, preference shares, inflation-linked bonds and derivatives to meet the investment objectives. Fund performance can be generated from taking interest rate views or duration, yield enhancement via credit instruments, asset allocation between income producing asset classes, offshore exposure and also via the use of derivatives.

WHO SHOULD INVEST

The Fund is suitable for corporate investors with a short to medium investment horizon seeking a conservative risk offering that aims to maximise income.

RISK INDICATOR DEFINITION

These portfolios typically have no or low equity exposure, resulting in higher interest yields and stable capital values with the probability of capital losses over the shorter term (3 months) highly unlikely. These portfolios typically target returns in the region of 2% – 3% above inflation before tax over the long term.

FUND COMMENTARY

Globally market participants are asking one very important question. Will we see inflation return? With the continued injection of liquidity by the Federal Reserve and with interest rates globally still very accommodative asset prices continue to perform well. The return of inflation could see this party end abruptly as the Fed will turn off the taps and tighten financial conditions. There are some signs of inflation moving higher but we remain of the view that this is transitory and will not see the Fed raise rates anytime soon. Locally we face a similar question, will the MPC start to increase interest rates again after cutting rates 3% in reaction to Covid-19 induced economic slump. Markets are pricing almost 2% rate increases in the next 2 years. We see this as overdone and see value in buying some fixed rate exposure at current levels.

The Fund performed in line with cash for the month. Most of the assets contributed to the return for the month. We remain vigilant in our risk management with yields suppressed and risk elevated. To this end we continue to hold protection strategies against our duration and offshore exposure.

45.41% of the portfolio is invested in Namibian money market assets. We attempt to keep this as low as possible given the lack of yield pickup currently in the Namibian market.

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs.
